

WORSHIP CENTER

CHURCH OF THE HIGHLANDS

New 2,400-seat sanctuary accommodates a growing worship base for one of the fastest growing churches in the U.S. Built on a 77-acre site outside Birmingham, the new facility serves as the hub of the main campus. Built in phases, the first phase includes a commons assembly area, children's wing and administrative office suite along with the main worship auditorium.

AD's team addressed acoustic challenges associated with the new sanctuary's fan shape with stadium seating. Design elements were incorporated to assure the space functioned well for music-rich services and supported congregation connections with one another and the overall worship experience. The auditorium also has a large flat floor to accommodate flexibility of uses and events. AD's acoustic team collaborated closely with performance audio and video system design to assure effective balance of natural sound and amplified content.
